

Launch Cost — Full Estimate vs. the Under-\$5,000 Plan

GamerGain / PlayEarning Nexus · everything included (PWA + Android + iOS)

At **\$75/hour**, cost is simply **hours × \$75**. The same finished product — the web PWA plus the Android and iOS apps, all features — can be launched two ways. The only difference is how many developer hours it takes, and that depends entirely on whether the developer works from the pre-built execution kit.

The two numbers, side by side

	Full estimate (baseline)	Under-\$5,000 plan (with the kit)
How the work is done	Developer figures it out as they go	Developer executes the pre-built kit
Hours	up to 125 hours	~50-66 hours
Rate	\$75 / hour	\$75 / hour
Labor cost	up to 125 × \$75 = \$9,375	~50-66 × \$75 = ~\$3,750-\$4,950
What you get	PWA + Android + iOS, all features	PWA + Android + iOS, all features (identical)

The key point: 125 hours at \$75/hour is \$9,375 — that is the baseline, not the \$5,000 figure.

The \$5,000 target is reached by **cutting the hours** (down to ~50-66), **not** by doing 125 hours for \$5,000. Nothing is removed from the product; the kit just deletes the wasted hours.

Where the hours (and dollars) go — phase by phase

Hours priced at \$75. "Baseline" = the un-optimized full path. "With kit" = using the pre-built deploy configs, cloud CI, checklists, and store-submission materials.

Phase	Baseline hrs	Baseline \$	With kit hrs	With kit \$	What the kit pre-builds to cut it
Accounts & API keys	8-12	\$600-900	6-8	\$450-600	Fill-in key worksheet
Backend + Postgres + scheduler	10-14	\$750-1,050	6-8	\$450-600	Railway configs + auto schema
Pre-deploy validation	3-6	\$225-450	1-2	\$75-150	validate.sh
Frontend deploy	4-8	\$300-600	2-3	\$150-225	Dockerfile + SPA fallback
Payments sandbox→live	10-15	\$750-1,125	8-10	\$600-750	Test-card checklist
Survey loop test	6-10	\$450-750	4-6	\$300-450	Postback + verify steps
Android submission	15-22	\$1,125-1,650	10-13	\$750-975	Listing copy + cloud CI build
QA pass	10-15	\$750-1,125	7-9	\$525-675	Scripted QA checklist
iOS submission (no Mac)	6-12	\$450-900	5-9	\$375-675	Cloud CI + reviewer demo mode
Load test (optional)	10-15	\$750-1,125	deferred	\$0	Defer until traffic justifies

Total (everything)	~95-125	~\$7,125-9,375	~49-68	~\$3,675-5,100	
--------------------	---------	----------------	--------	----------------	--

At the top of the baseline that's the **125 hours × \$75 = \$9,375** you asked about. With the kit, the same three-platform launch runs **~50-66 hours**, i.e. **under \$5,000** in the normal case.

Honest caveats

- These are **planning ranges, not guarantees**. A clean run lands near the low end; a messy provider approval or an **iOS App Store rejection round** can add hours. The kit's reviewer-demo-mode and "merit-not-gambling" framing exist specifically to keep iOS review clean and protect the number — but a rejection is the one thing that could nudge the kit total to the top (~\$5,100).
- The **\$5,000 is developer labor only**. Outside it (and unavoidable): Apple Developer **\$99/yr**, Google Play **\$25** one-time, a domain **~\$12-15/yr**, and hosting **~\$10-30/mo** at launch traffic.
- **Nothing is removed** to hit \$5,000 — PWA, Android, and iOS all ship with every feature. The saving comes entirely from replacing "figure it out" hours with "follow the kit" hours.

Bottom line

- **125 hours × \$75 = \$9,375** — the full-retail, un-optimized way.
- **~50-66 hours × \$75 = ~\$3,750-\$4,950** — the same launch, done from the execution kit, **under \$5,000**.

Same app. The price difference is entirely the hours, and the hours are entirely about whether the developer uses the kit.
