

Launch Estimate — Effort & Cost (execution kit, automation-expanded)

GamerGain / PlayEarning Nexus — PWA (web) + Android + iOS

Prepared July 25, 2026. Assumes a developer runs the **pre-built execution kit**, which now includes extra automation (auto-migrating DB, single-service deploy, a Railway deploy script, a key-validation wizard, a one-command end-to-end smoke test, demo seed data, fastlane store submission, auto screenshots, a reviewer demo mode, and agent validators). Rate: **\$75/hour**.

The number

	Value
Scope	Full launch — PWA + Android + iOS, all features
Rate	\$75 / hour
Launch effort / cost	~30-45 hours = ~\$2,250-\$3,375
Load test (user-capacity testing)	+8-12 hours = +\$600-900
Total incl. load testing	~38-57 hours = ~\$2,850-\$4,275

With the expanded automation, the full three-platform launch runs ~\$2,250-\$3,375, and ~\$2,850-\$4,275 with the user-capacity load test — well under \$5,000. This is down from the earlier ~\$3,750-\$4,950 because more of the deploy, test, and submission steps are now scripted rather than done by hand.

Phase by phase (at \$75/hr, with the new automation)

#	Work	Hours	Cost	New automation that cuts it
1	Keys + config	4-5	\$300-375	<code>env-check</code> pings each provider to catch bad keys instantly
2	Deploy backend + DB + scheduler + frontend (one service)	3-5	\$225-375	<code>railway-deploy.sh</code> , auto-migrate on boot, inline scheduler, backend serves the frontend
3	Payments sandbox → live	7-9	\$525-675	checklist (unchanged — real money still tested by hand)
4	Survey/earn loop live test	3-4	\$225-300	<code>seed-demo</code> + <code>e2e-smoke</code>
5	Android build + submit	6-9	\$450-675	fastlane lane + auto screenshots
6	iOS build + submit (no Mac)	4-6	\$300-450	reviewer demo mode + fastlane + cloud CI
7	QA pass	3-5	\$225-375	<code>e2e-smoke</code> replaces manual click-through of the critical path
	Subtotal — launch	~30-43	~\$2,250-\$3,225	
8	Load test — how many users it handles	8-12	\$600-900	<code>LOAD-TEST-PLAN.md</code>
	Total — launch + load testing	~38-55	~\$2,850-\$4,125	

		33	\$4,125	
--	--	----	---------	--

What's NOT in that number (unchanged)

- **You create the accounts** (Stripe, PayPal, OpenAI, Apple, Google, hosting, domain) — only you can; not billed to the developer.
- Fixed/recurring, separate from labor: Apple **\$99/yr**, Google Play **\$25**, domain **~\$15/yr**, hosting **~\$10-30/mo**, LLM/provider usage, optional legal review **\$500-2,500**.

The floor (why it doesn't go to zero)

No amount of extra code removes the **account signups, the first-run dashboard setup, or Apple/Google review** — those are the human/external hours that remain. The automation drives down the *scriptable* work; what's left is mostly waiting on other people.

Bottom line

Following the automation-expanded execution kit at **\$75/hour**, the full **PWA + Android + iOS** launch is **~\$2,250-\$3,375**, or **~\$2,850-\$4,275 including the user-capacity load test** — developer labor only, with the fixed fees and hosting separate.
