

Subprocessors

The third parties that may process personal or operational data on GamerGain's behalf. Publish a version of this list (privacy laws often require it) and keep it current. Only providers you actually enable apply. Not legal advice.

Subprocessor	Purpose	Data it may process	Region
Railway (or your host)	App + backend hosting	All app data in transit/at rest	[region]
Managed PostgreSQL	Primary database	All stored app data	[region]
Amazon Web Services — Bedrock	AI image generation (catalog)	Text prompts (no personal data)	[region]
Amazon Web Services — S3 (optional)	Image storage	Generated images	[region]
LLM provider (Anthropic and/or OpenAI)	Text generation, assistant, optimization	Prompt content; assistant messages	US/[region]
Stripe (optional)	Card payment processing	Payment + limited billing data	US/global
PayPal / Venmo / Cash App (optional)	Alternate payments/payouts	Payment identifiers	US/global
SendGrid or Amazon SES	Transactional & marketing email	Email address, message content	US/[region]
Twilio (optional)	SMS (off by default)	Phone number, message content	US/global
ipapi.co (or equivalent)	IP geolocation → country	IP address (transient)	US/global
exchangerate-api.com (or equivalent)	Currency conversion rates	None (rates only)	US/global
Survey/offer providers (e.g. BitLabs)	Earning activities	Activity completion signals, survey responses	Various
Affiliate networks (e.g. Amazon Associates)	Affiliate links/feeds (only if you enable)	Click/referral data via outbound links	Various
Error/analytics (optional, e.g. Sentry)	Crash & performance monitoring	Diagnostic data	[region]
App stores (Apple, Google)	Distribution & in-app purchase	Store account/purchase data	Global

Guidance: - Sign a **Data Processing Agreement** with each subprocessor that handles personal data. - Remove rows for services you don't use; add any you add. - Notify users of material changes to this list where your privacy notice or law requires. - Affiliate retailers

reached through outbound “find the real thing” links are **independent controllers**, not our subprocessors — we don’t send them account data; the user leaves our app.
