

DIGITAL STORE

Digital Products store

A “Digital Products” section mirroring the Physical Items store, for intangible goods delivered **online instantly** — no shipping, no local pickup. Same parity and constraints as physical, with two deliberate differences.

Same as the physical store

- **Serverless-GPU category tile:** “Digital Products” is a department in `taxonomy.ts`, so `aiCategoryImages` generates its tile (and its subcategory tiles) exactly like every other category.
- **Full parity:** search, sort, localized pricing, listing grid.
- **Payment:** Credit card (default, +10% markup) · Points/surveys-only (marked-up points shown) · Layaway (reserve & pay it down with points, then it unlocks — $\leq \text{LAYAWAY_MAX_MONTHLY_USD/mo}$).
- **Promotional (welcome) credit** applied per the same rules (markup-funded, margin-positive).
- **Affordability warning** over `PHYSICAL_AFFORDABILITY_LIMIT_USD` (\$1,460), and the **Purchase Payback** earn-back tracker.

Sort control + one-click Buy now

Same as the physical store: an Amazon-style **sort dropdown** at the top of the results (Featured, Price $\uparrow/\downarrow$, Avg. Customer Review, Newest, Best Sellers) via the shared `src/lib/storeSort.js`, plus the one-click **Buy now** button that logs the order and then prompts to complete it (nothing charged until confirmed + card on file). See `STORE-SORT-AND-ONE-CLICK.md`. Teen orders route to the adult holder for approval (see `HOUSEHOLD-TEEN-ACCOUNTS.md`).

Two deliberate differences

- **Online delivery only** — there is no local-pickup option; a paid digital order is marked delivered immediately with `fulfillment_type: "digital_delivery"`.
- **No Affirm BNPL** — financing is restricted to real, shippable goods (the Affirm guardrail already hard-blocks digital/points/credit), so the Digital store never offers BNPL.

How items are separated

A listing is digital when its `product_type` is “digital”, its `fulfillment_mode` is “digital”, or its category is in `DIGITAL_CATEGORIES` (`catalog.ts`, kept in sync with the taxonomy department). The Digital store shows **only** those; the Physical store **excludes** them. `physicalStoreConfig` returns `digital_categories` so both pages filter consistently. `createMarketplaceListing` accepts `product_type: "digital"` (with an optional `digital_delivery` payload) for member/creator digital listings; the catalog seeder populates the digital taxonomy categories with original AI products + serverless-GPU tiles like everything else.

Controls

Flag `digital_store` (default on). Reuses the physical store's settings (`STORE_MARKUP`, `PHYSICAL_AFFORDABILITY_LIMIT_USD`, `LAYAWAY_MAX_MONTHLY_USD`, `PROMO_FUNDED_BY_MARKUP`). Nav entry + Marketplace banner. `DigitalStore` page auto-routes.
